

COMPANY PROFILE

**INNOVATIVE
COMPETITIVE
PROFESSIONAL SERVICE**

BRIEF HISTORY

From its humble beginning as a husband and wife venture in 2004, GPI to date has a growing roster of clients ranging from individuals to Triple-A contractors, from households to publicly-listed corporations. The basic ingredients to its growth are clear vision, determination, discipline, and faith (in self and in God).

From small beginnings come great things. GPI started when its founder, inspired by Kiyosaki and driven by his aspiration to contribute employment to society, decided to put up an electrical engineering company that aims to make contributions to the advancement and welfare of humanity. Through the years, the company's Vision, Mission, and Values serve as a compass giving direction to where the organization is heading. Integrity, honesty, fairness, humility, and teamwork are among the primary principles the whole team adheres to in providing excellent service and quality products to its clients.

Equally important as clients, GPI continuously nurtures a good business relationship with its suppliers primarily through well-managed credit lines and terms.

As part of its pillars, the company gives importance to its most valuable resources – its people. Its concern for the employees transcends through whole-person dimensions– physical, emotional, mental, and social. The management sees to it that the needs of employees are attended to through instilling proper values and principles, giving appropriate compensation packages, and opportunities to continuously improve through seminars and training. Since 2004, it has been the company's commitment to provide meaningful work for its growing number of employees. The team also projects a fun working environment, thus, making work enjoyable resulting in a low attrition rate over the years.

GPI also gives importance to taking care of its environment. It continues to support UNICEF by giving donations and launching several CSR projects such as participation in runs for a cause, tree planting, and providing relief goods to calamity casualties.

GREENLIGHT POWER, INC. commits to continue providing quality products and services to its clients and shall constantly seek to improve quality and productivity for the achievement of its vision to be the most preferred world-class Electrical Contractor and Supplier in the Philippines.

VISION

We are the most preferred, world-class electrical contractor and supplier in the Philippines.

MISSION

To make contributions for the advancement and welfare of humanity by:

- Satisfying our customer's needs for excellent quality services and outstanding value of products.
- Maintaining good relations with customers, employees, suppliers, shareholders and the communities we serve.
- Constantly improving on quality and productivity to make things more efficient and effective.
- Commitment to uphold a high-quality work force with equal opportunities for all.

VALUES

We adhere to the following principles:

- Integrity
- Sense of Ownership
- Innovation and Continuous Improvement
- Teamwork
- Fairness
